Solution 1 +

NeetBot

Hint

Ln 5, Col 9

```
1 class Solution:
2     def isAnagram(self, s: str, t: str) -> bool:
3         return sorted(s) == sorted(t)
4
5
```

Test Case

Output

Accepted

Passed test cases: 27 / 27

NeetBot

Hint

Ln 14, Col 20

```
1 class Solution:
2     def isAnagram(self, s: str, t: str) -> bool:
3         if len(s) != len(t):
4             return False
5         count = {}
6         for char in s:
7             count[char] = count.get(char, 0) + 1
8         for char in t:
9             if char not in count:
10                return False
11             count[char] -= 1
12             if count[char] < 0:
13                 return False
14         return True
15
```
